

EOS (Early Onset Sepsis) Risk Management Guideline

Any newborn who presents with clinical illness despite risk category will be admitted to NICU

EOS risk score is calculated automatically in the Delivery Summary for all newborns ≥ 34 weeks based on maternal data in Epic

If EOS risk at birth is ≥ 0.65 , LIP will determine appropriate management of the newborn using the Kaiser Sepsis calculator and discuss plan of care with the newborn's nurse

Notify LIP of persistent abnormal vital signs after birth:

Notify for one persistent abnormality ≥ 4 hours or two or more abnormalities ≥ 2 hours:

- HR ≥ 160
- RR ≥ 60
- Temp $\geq 38.0^{\circ}\text{C}$ (100.4°F) or $< 36.5^{\circ}\text{C}$ (97.7°F)
- Respiratory distress (eg. nasal flaring, grunting, retractions) but not requiring O2
